Apr 6, 1999

DOCUMENT-IDENTIFIED: US 5893080 A TITLE: Disbursement system and method

BSPR:

Unfortunately, none of the aforesaid prior art permits fully automated payment disbursement according to user-predefined criteria, such as, disbursement financial account (e.g., bank or investment account number and type of account) and manner of payment (e.g., whether disbursement is to be made by hard-copy magnetic ink Character Recognizable (MICR) negotiable instrument or by EFT) for different types of disbursements to be made (e.g., payments to suppliers, rebates, taxes, etc.), and individual disbursement requests (e.g. including such information as disbursement amount, intended payee, etc.) Additionally, none of the aforesaid prior art provides fully automated diagnostic means for monitoring whether the system is functioning properly and for preventing improper disbursements from taking place.

. . . being most usual is the rate (amount of money charged per unit of time). However, many other kinds of economic incentive may

be offered, such as a credit toward other services

(e.g., frequent flyer points) or a credit toward an additional

rebate that may be offered if a user's traffic for a

given month (or that of another telecommunications service provider reselling, for example, a participating Carrier's

service) rises above a threshold. The economic incentive could be a combination of rate and another incentive. But the economic

incentive should be selected from a limited set. .

DOCUMENT-IDENTIFIER: US 4982346 A TITLE: Mall promotion network apparatus and method

DEPR:

The present invention is a Mail Promotion Network Computer System and Method. The Mall Promotion Network automates marketing campaigns and advertising. When located in a mall, or similar retail area, the Mall Promotion Network will control sweepstakes, frequent buyer and other similar frequency programs, discount coupons, prizes, give-aways, rebates, and, of course, visual advertising.

DEPR-

In national sweepstakes promotions national "Fortune 500" companies and other organizations would use the Mall Promotion Network to distribute prize notifications and advertise to attract customers to their products. A direct mail campaign distributes magnetic or bar code cards (similar to credit cards) to selected customers in the geographic vicinity of a retail mall or similar shopping area. These customers would bring the cards to the Mall Promotion Network kiosk located at a mall and scan their cards through a card reader. If the customer has a winning number, they would be awarded a prize. If the customer doesn't win a prize, they might still be awarded a coupon or discount for merchandise.

DEPR+

It is envisioned that the Mail Promotion Network could award coupons or prizes based on the number of visits the amount of the purchases the customer makes to the mall or retail outlet where the present invention is located. The Mall Promotion Network would track the frequency of the card scans and award coupons, discounts rebates, or prizes based on a schedule and the number of visits. If the card is scanned at the same time that a chit is scanned, the Mall Promotion Network could track the number of visits or by the customer purchases and award prizes on this basis as well.

DEPR

The Mall Promotion Network can issue <u>rebate</u> tickets to customers upon request. Thus, it is possible to electronically transmit the <u>rebate</u> to the manufacturers thereby eliminating the need for the user to mail the <u>rebate</u> form

DEPR:

FIGS. 35A and 35B combined are a flow chart describing the functions of the display item routine. The display item routine starts (830) when executed by the order processing routine as described in FIG. 34 (824). Passed as a parameter to this routine is the item picture name 1032, as described in FIG. 47, for the item selected by the customer. The item picture is displayed on the monitor 14 (832). The read touch screen couch routine is executed to await user input (834). Upon completion of the read touch screen routine, it must be determined whether the customer entered a selection or whether the timer expired (836). If the timer expired (836), then the display item routine.

)

terminates (870). If the customer entered a command, then the type of command must be determined. If the "previous" command is entered (840), the "previous" flag is set and the display item routine terminates (870). In all other cases, it is assumed that the customer selected an item to order (844). A message is displayed on the monitor 14 asking for insertion into the card reader 24 of the customer's credit card (846). The card reader routine is then executed (848). The card expiration date must first be examined (852). If the card has expired (852), the appropriate message is displayed on the monitor 14 (850). If the card is valid (852), the order transaction is written to the order file (854, 860 and 864), and the display item routine terminates (870). The structure of the order file is described in FIG. 43. Each order file record 1006 includes the credit card number 1008, the customer name 1010, the item number 1012, and the item price 1014. If an error occurs during the order file processing (856), an appropriate message is displayed on the monitor 14 (858) and a message is written to the error file (862, 856, and 868).

Jan 1, 1991 The Mall Promotion Network can issue rebate tickets to customers upon request.
